

01 — Brand foundation

LAMHA is designed as a global technology brand: concise, engineered, scalable, and product-agnostic.

Brand idea

The identity combines a structured geometric symbol with a clean wordmark. The visual language communicates software architecture, connectivity, precision, and forward movement without relying on cliché circuit-board imagery.

Brand personality

Attribute	Expression
Intelligent	Clear hierarchy, deliberate geometry, restrained color
Modern	Contemporary sans-serif typography and modular forms
Trustworthy	Deep navy foundation and disciplined spacing
Innovative	Electric-blue accents and asymmetric geometry
Scalable	Works from favicon/app icon to corporate signage

Core principle

The logo should feel precise before decorative. Color is an accent, not the identity itself. The mark must remain recognizable in one color.

02 — Logo anatomy

Concept 07 is built as a two-part identity: a geometric symbol and the LAMHA wordmark. The secondary line identifies the legal entity.

Symbol

The angular L-form is the primary brand device. The two blue diamonds act as directional nodes: they suggest modularity, data flow, and connected systems.

Wordmark

LAMHA is set in a strong geometric sans-serif treatment with generous tracking. The wordmark should never be stretched, condensed, outlined, or replaced with an unrelated font.

Legal descriptor

“TECHNOLOGIES (PVT.) LTD.” is a supporting descriptor, not the primary brand name. It may be removed in small digital contexts where legal identification is unnecessary.

03 — Construction & proportions

The mark uses a modular construction so that future refinements can be recreated consistently.

Construction rules

1. Preserve the relative geometry of the symbol. 2. Keep the two blue nodes separate from the navy structure. 3. Maintain the wordmark-to-symbol relationship in the primary lockup. 4. Use optical alignment rather than forcing every element to the same mathematical baseline.

Recommended master artwork

Maintain an editable vector master in SVG/PDF/EPS format. Raster exports should be generated from the master rather than redrawn.

04 — Clear space & minimum size

Clear space protects the mark from competing visual elements.

Minimum clear space

As a practical rule, keep an exclusion zone around the complete lockup equal to at least the height of the smaller blue node. Increase the space whenever the logo is placed next to photography, dense UI, or competing brands.

Minimum digital size

Primary lockup: approximately 140 px wide minimum. Symbol alone: approximately 24 px minimum. Below these sizes, use the symbol-only mark.

05 — Color system

The palette is deliberately compact. Navy carries trust and structure; blue provides energy and digital recognition.

Role	HEX	RGB	Usage
LAMHA Navy	#0B1B3A	11, 27, 58	Primary mark, headings, dark UI
LAMHA Blue	#1769E0	23, 105, 224	Primary accent, links, highlights
LAMHA Blue 2	#2E7CF6	46, 124, 246	Secondary accent, gradients
Cloud	#F5F8FC	245, 248, 252	Backgrounds
White	#FFFFFF	255, 255, 255	Reverse logo / dark backgrounds
Ink	#162033	22, 32, 51	Body text

Color ratio

Use navy and neutral space as the dominant visual field. Blue should generally remain an accent rather than becoming the entire page. For accessibility, verify text contrast in each implementation.

06 — Typography

Typography should support the logo: geometric, contemporary, and highly legible across product UI and corporate communication.

Level	Recommended treatment	Purpose
Display	Montserrat / Inter / equivalent geometric sans, Bold	Campaigns, hero headings
Heading	Inter / Montserrat, Semibold	Web, product, presentations
Body	Inter / Source Sans 3 / equivalent	Long-form reading
Metadata	Inter, Medium, tracking +8 to +30	Labels, captions, legal descriptor

Legal descriptor styling

Keep “TECHNOLOGIES (PVT.) LTD.” uppercase, smaller than the wordmark, with generous tracking. It should read as supporting information rather than compete with LAMHA.

07 — Approved logo variants

Use the version that preserves legibility and hierarchy in the given environment.

Primary

Use A for standard website headers, proposals, documents, light UI, and corporate materials.

Reverse

Use B on navy or other sufficiently dark solid backgrounds. Avoid placing the full-color version directly over busy imagery.

Symbol-only

Use C for app icons, favicons, social avatars, product icons, and small digital placements.

08 — Incorrect usage

Consistency matters more than decoration. The following treatments weaken recognition and should not be used.

Never

- Stretch or compress the logo.
- Rotate or skew it.
- Change the relationship between symbol and wordmark.
- Apply bevels, drop shadows, glows, outlines, or arbitrary gradients.
- Place it on low-contrast backgrounds.
- Rebuild it with substitute symbols.

09 — Digital & physical implementation

The identity is intended to work across software products, corporate communications, and real-world environments.

Application	Recommended asset	Notes
Website header	Primary lockup	Prefer SVG; maintain clear space
Web favicon	Symbol-only	16–32 px; simplify only if needed
App icon	Symbol-only	Use solid background with strong contrast
Social avatar	Symbol-only	Center optically; avoid full legal descriptor
Presentation	Primary or reverse	Use generous negative space
Email signature	Primary lockup	Use controlled raster/SVG export
Business card	Primary lockup	Keep legal descriptor legible
Office signage	Vector primary/reverse	Use original vector artwork
Merchandise	Symbol or wordmark	One-color version preferred for embroidery

File-format standard

Master: SVG / EPS / editable PDF. Digital: SVG + transparent PNG. Print: vector PDF/EPS. Never: use a screenshot as the master artwork.

10 — Production specification

These specifications give designers and developers a repeatable implementation baseline.

Item	Standard
Primary brand name	LAMHA
Legal name	LAMHA Technologies (Pvt.) Ltd.
Primary symbol	Geometric L + two blue nodes
Primary navy	#0B1B3A
Primary blue	#1769E0
Secondary blue	#2E7CF6
Preferred type family	Inter / Montserrat or equivalent
Minimum lockup width	~140 px digital
Minimum symbol width	~24 px digital
Preferred export	SVG
Master construction	Vector / editable

Governance

One approved master should be maintained by the company. Product teams may use the symbol independently, but changes to geometry, wordmark, colors, or proportions should be treated as brand-level changes and reviewed before release.
