

LAMHA

TECHNOLOGIES (PVT.) LTD.

FINAL WEBSITE PRODUCT REQUIREMENTS DOCUMENT

Version 2.0 — Finalized Direction

Technology That Turns Problems Into Progress.

Final website specification combining the original LAMHA PRD with the supplied Wezero reference and the attached visual direction.

Primary CTA: Start a Project | Language: English | Responsive: Desktop / Tablet / Mobile

01 Executive Summary

This is the finalized website PRD for LAMHA Technologies (Pvt.) Ltd. It preserves the original business requirements while adding the digital-studio service layer requested from the Wezero reference. The result is a LAMHA-specific system, not a copy.

The original PRD defines the website as LAMHA's primary public presence and lead-generation channel, with a future path from website lead intake into CRM, qualification, outreach/dialer, proposal, project delivery and finance.

The supplied Wezero website presents a concise, editorial agency experience and publicly lists Design, Build, Strategy, SEO, Branding, Motion, Analytics and Scale, with detailed references to Web Design, Brand Identity, Web Development and Digital Strategy.

Final direction: premium technology studio + engineering company: dark cinematic hero areas, white editorial sections, electric-blue accents, oversized typography, numbered sections, modular service cards, technical imagery, subtle motion and strong conversion CTAs.

02 Company & Positioning

Company: LAMHA Technologies (Pvt.) Ltd.

Leadership: Founder — Syeda Laiba Haider; Co-Founder — Ahmed Majid; CEO — Maira Almas; Board of Directors — Syed Hamad Haider.

Positioning: LAMHA Technologies helps businesses, startups and organizations turn technical requirements and real-world problems into practical software, digital products and technology solutions.

Tagline: Technology That Turns Problems Into Progress.

Supporting line: From Ideas to Systems. From Systems to Impact.

Personality: premium, technical, modern, ambitious, trustworthy, international and engineering-driven.

03 Final Service Architecture

The final website uses three service families. This adds the requested Wezero-inspired capabilities without making LAMHA look like a generic agency.

Family	Service	Final website scope
Technology Engineering	Software Development	Custom software, SaaS, business applications, internal tools, APIs and automation.
Technology Engineering	Web Development	Corporate sites, web apps, SaaS, dashboards, portals, e-commerce and integrations.
Technology Engineering	Mobile / iOS	iOS, mobile and cross-platform applications with supporting backend systems.
Technology Engineering	Polyglot Full-Stack	Frontend, backend, databases, APIs, cloud, mobile, infrastructure and integrations.
Technology Engineering	QA & Testing	Functional, regression, API, UI, performance, automation, web and mobile testing.
Technology Engineering	Security	Security-conscious engineering, application security review and technical security services.
Digital Experience	Web Design / UI/UX	Clarity-first interfaces, responsive UX, design systems, interaction design and conversion-oriented experiences.
Digital Experience	Brand Identity	Visual identity systems, digital brand assets, typography, logo applications and scalable consistency.
Digital Experience	Motion & Interaction	Purposeful animation, micro-interactions, scroll behavior and motion systems.
Growth & Optimization	Digital Strategy	Business, product and digital strategy before design/build decisions.
Growth & Optimization	SEO	Technical SEO, on-page structure, metadata, performance and discoverability.
Growth & Optimization	Analytics	Measurement planning, event tracking, conversion analytics and decision-oriented reporting.
Growth & Optimization	Scale & Optimization	Performance, conversion, modernization, infrastructure readiness and continuous improvement.

Reference basis: the supplied Wezero website explicitly lists Design, Build, Strategy, SEO, Branding, Motion, Analytics and Scale and describes Web Design, Brand Identity, Web Development and Digital Strategy. LAMHA's final names and descriptions are original and aligned to its technology positioning.

04 Future Engineering Services

- PCB design
- Electrical engineering solutions
- Solar solutions
- Automatic solar-panel cleaning systems
- Roofing
- Hardware / automation
- Other engineering and R&D; services

These should be supported by the information architecture but kept separate from active technology/digital services until LAMHA is operationally ready to deliver them.

06 Homepage — Final UI

- **Hero:** Technology That Turns Problems Into Progress. Supporting copy + Start a Project + Explore Services.
- **Hero visual:** dark technical world/network/architecture imagery or abstract data visualization; blue light; restrained motion.
- **Capability strip:** BUILD — software and digital products; ENGINEER — technical systems and solutions; EVOLVE — strategy, design, automation, QA, security, SEO and optimization.
- **Services:** grouped service cards with short descriptions and arrows.
- **Process:** Discover → Define → Design → Build → Test → Deploy & Evolve.
- **Why LAMHA:** business-first engineering; full lifecycle delivery; flexible engineering; built for scale; quality by design; long-term partnership.

- **Technology:** frontend, backend, mobile, cloud, databases, DevOps, testing, AI/automation and security.
- **Products & R&D:** “We Build for Ourselves, Too.”
- **Work:** CMS-ready case-study placeholder.
- **Founder:** prominent Founder block with approved biography and portrait.
- **Careers:** Build What Comes Next With Us.
- **Final CTA:** Have a problem worth solving? → Start a Project.

07 Service Detail Page

- Numbered breadcrumb + service title + business outcome + Start a Project.
- Problem / opportunity section.
- Capabilities as modular cards.
- How we work / delivery process.
- Technology and implementation approach; only actual capabilities.
- Deliverables and quality/security considerations.
- FAQ from CMS.
- Related services and final CTA.
- Use a large service-specific visual; software pages can use UI/code imagery, design pages can use interface systems, branding pages can use identity boards, and strategy/SEO/analytics pages can use diagrams/data visualizations.

08 Work / Portfolio

Launch with an intentional CMS-ready placeholder if approved case studies are not available. Once populated, use large editorial cards with categories such as Web, Mobile, SaaS, AI, Enterprise, Branding and Automation.

Each case study should follow: Challenge → Approach → Solution → Technology → Outcome → Visuals → Testimonial, with only approved evidence. Never fabricate clients, metrics, outcomes or testimonials.

09 About & Leadership

- About sequence: About LAMHA → Why We Exist → What We Believe → How We Work → Founder → Leadership → Where We're Going.
- Mission: To solve meaningful problems through technology, engineering and continuous innovation.
- Vision: To build a global technology company that creates practical solutions for businesses, develops proprietary technology, and expands into new engineering frontiers.
- Founder is the primary public leadership feature at launch.
- Leadership modules are expandable and use approved biographies/portraits only.

10 Careers

Hero: Build What Comes Next With Us.

Show culture, engineering philosophy, teams, growth, global opportunities and open positions. Job pages include title, department, location, employment type, description, responsibilities, requirements, nice-to-have skills and benefits.

Application fields: name, email, phone, CV, portfolio, LinkedIn, GitHub, cover letter and role. Architect for future connection to an internal recruitment/candidate system.

11 Start a Project — Conversion

Section	Fields
Contact	Full Name; Company; Work Email; Phone; Country

Section	Fields
Project	Project Name; Service Required; Business/Industry; Project Description; Current Stage
Service	All final launch services + Other
Budget	Under \$1k; \$1k–\$5k; \$5k–\$10k; \$10k–\$25k; \$25k–\$50k; \$50k+; Not sure
Timeline	ASAP; 1 month; 1–3 months; 3–6 months; 6+ months; Flexible
Attachments	PDF, DOC/DOCX and approved project files; secure type/size validation
Consent	Permission for LAMHA to contact requester

Flow: Visitor → Start a Project → Form → Validation → Submission → Confirmation → Internal Lead Record → CRM → Sales/BD Team → future LinkedOut/prospecting → Dialer/communications.

Confirmation: Thank you — we've received your project inquiry. Our team will review the information you provided and contact you using the details submitted. Do not promise an SLA until one is formally established.

12 Visual Design System

Element	Final direction
Aesthetic	Premium digital studio + technical engineering company; editorial, minimal, confident, international.
Surfaces	Near-black/navy hero and CTA areas; white/off-white editorial content.
Accent	Electric/vivid blue used selectively for interaction and emphasis.
Typography	Modern sans-serif: Geist, Inter, Manrope, Satoshi or Plus Jakarta Sans; final choice follows brand guide.
Headlines	Large, short, high-contrast; selective blue word emphasis.
Section labels	Small uppercase labels + numbered sections: 01, 02, 03...
Cards	Clean modular cards, subtle borders, generous whitespace, small icons.
Imagery	Architecture, technology, screens, abstract systems, data, light, engineering and collaboration.
Motion	Scroll reveals, hover states, image transitions and purposeful micro-interactions; reduced-motion mode required.
Navigation	Minimal top nav with persistent Start a Project CTA; clean mobile menu.
Texture	Optional thin grid/data lines/technical diagrams; never overpower content.

13 Reference-Inspired Rules

- Use the reference's **clarity**: concise copy and strong hierarchy.
- Use the reference's **service breadth**: Design, Build, Strategy, SEO, Branding, Motion, Analytics and Scale translated into LAMHA's own services.
- Use **LAMHA's technical differentiation**: software engineering, architecture, QA, security, AI/automation and R&D.;
- Use editorial composition: oversized type, numbered sections, large visual moments and whitespace.
- Use technical cues: system diagrams, UI/code imagery, network maps, abstract data structures and subtle grids.
- Do not reproduce the reference site's logo, copy, proprietary identity or exact layouts.

14 Technology & Architecture

Layer	Requirement
Frontend	Responsive marketing site, reusable components, accessible UI, optimized media and controlled motion.
API	Secure project-intake endpoint, validation, anti-spam/rate limiting, file handling and CRM-ready payloads.

Layer	Requirement
CMS	Services, jobs, projects, insights, products and leadership; service categories configurable.
CRM	Lead payload maps to contact, company, project, service, budget, timeline, source and status.
Analytics	Acquisition, engagement, conversion, commercial and recruitment measurement.
Integrations	Email at launch; CRM, LinkedOut, Dialer and future Company OS without frontend rewrite.
Security	HTTPS, security headers, server-side validation, secure uploads, secrets outside bundles, least privilege and monitoring.

Target flow: Website Frontend → API Layer → CMS / Lead API / Analytics → CRM. Future: Website → Lead → CRM → Qualification → LinkedOut/Prospecting → Dialer/Communication → Proposal → Contract → Project → Delivery → Invoice → Customer.

15 CMS Content Models

Model	Core fields
Services	Title, group, description, capabilities, benefits, deliverables, process, FAQs, related services, status, hero media.
Jobs	Position, department, location, employment type, description, responsibilities, requirements, benefits, status.
Projects	Title, client, industry, challenge, solution, technology, outcome, images, testimonial, category, status.
Insights	Title, author, date, content, category, SEO metadata, hero image.
Products	Name, description, status, screenshots, CTA, approved visibility.
Leadership	Name, role, approved biography, portrait, profile link, display status.
Global settings	Navigation, CTA labels, contact details, social links, footer and SEO defaults.

16 SEO, Accessibility, Performance & Security

- Unique titles/meta descriptions, canonical URLs, sitemap.xml, robots.txt, Open Graph and appropriate structured data.
- Clean semantic headings and URLs; no thin location pages solely for SEO.
- Topic clusters: custom software, web development, mobile/iOS, full-stack, QA/testing, security, UI/UX, branding, strategy, SEO and analytics.
- WCAG 2.2 AA target: keyboard navigation, visible focus, semantic HTML, contrast, accessible forms, alt text, reduced motion and screen-reader support.
- Optimize Core Web Vitals, responsive images, caching/CDN and lazy loading.
- Secure form and file handling, bot protection, rate limiting, server-side validation and monitoring.
- No production secrets in frontend source or public repositories.

17 Analytics & Business Measurement

Category	Measurement
Acquisition	Source, medium, country, device, landing page.
Engagement	Page views, service views, scroll depth, navigation and CTA clicks.
Conversion	Start a Project clicks, form starts, completion rate, abandonment, submissions.
Commercial	Qualified leads, opportunities, proposals, wins, average project value.
Recruitment	Careers views, job views, applications, qualified applicants, hires.
Performance	Core Web Vitals, page speed, JS/API errors and uptime.

18 LAMHA Business & Product Ecosystem

LAMHA retains two complementary engines: Technology Services and Proprietary Technology. Internal systems, automation and R&D; can later become reusable B2B products, but confidential products should not be presented publicly until approved.

Website → CRM → Qualification → LinkedOut/Prospecting → Dialer → Proposal → Contract → Project → Delivery → Finance → Customer.

The public site is therefore both a marketing experience and the first public interface to the future LAMHA digital operating ecosystem.

19 Implementation Phases

Phase	Scope	Outcome
MVP	Home; Services; service details; About; Founder; Careers; Contact/Start a Project; CRM; analytics; SEO; leadership; accessibility foundations.	CRM ready; analytics; SEO; leadership; accessibility foundations.
Phase 2	Work/case studies; Insights; Technology; solution/industry pages; expanded leadership; approved testimonials/logos; Products.	Product approved; testimonials/logos; Products.
Phase 3	Client portal; project tracking; dashboard; proposal system; automated qualification; CRM; LinkedOut; Dialer; Project; Finance; HR; QA; Security.	CRM; LinkedOut; Dialer; Project; Finance; HR; QA; Security.
Phase 4	LAMHA.com → Customer Portal → Platform → CRM / LinkedOut / Dialer → ACRM / Company OS.	Unified company OS.

20 Acceptance Criteria

- Positioning is clear in the first screen and Start a Project is always discoverable.
- Original technology services plus the newly approved digital-studio services are represented accurately.
- Future physical/engineering services are clearly separated from active services.
- Visual system is technical, premium, editorial and restrained.
- Founder information is accurate and approved.
- Project form validates, submits securely, confirms receipt and produces a CRM-ready payload.
- Responsive desktop/tablet/mobile implementation.
- WCAG 2.2 AA foundations.
- SEO metadata, sitemap, robots and Open Graph.
- Analytics/conversion events work.
- CMS allows approved updates without code changes.
- No invented statistics, clients, testimonials, awards, certifications or unsupported technology claims.
- Future CRM, LinkedOut, Dialer and Company OS integrations are possible without rebuilding the frontend.

21 Designer & Developer Handoff

- This PRD defines requirements, not a mandatory framework.
- First produce final sitemap, wireframes, responsive layouts and design system for approval.
- Treat the supplied image as visual direction, not a pixel-copy target.
- Use the finalized LAMHA logo/brand guide as the color/logo source of truth.
- Use original imagery, original copy and approved company facts.
- Keep service and product content CMS-configurable.
- Provide reduced-motion accessibility.
- Do not expose confidential internal product details without approval.

22 Supplied Visual Reference

The attached reference image establishes the intended overall composition: dark hero, white editorial service sections, electric-blue accents, large typography, service cards, software detail pages, portfolio grid, leadership presentation, careers and a dedicated project form.

Implementation note: preserve the information hierarchy and visual principles while creating original LAMHA components, imagery and brand treatment.
