TECHNOLOGIES (PVT.) LTD.

WEBSITE MVP — VISUAL & FUNCTIONAL PDF

Based on Final Website PRD v2.0

Technology That Turns Problems Into Progress.

A practical MVP representation for design, development and stakeholder review.

Desktop-first responsive direction • Technical / editorial visual system • Project lead conversion

01 MVP SCOPE

This PDF turns the final LAMHA website PRD into a concrete MVP screen specification. The uploaded PRD defines the MVP around Home, Services/service details, About, Founder, Careers, Contact/Start a Project, CMS, analytics, SEO/security/accessibility foundations, with later CRM/LinkedOut/Dialer integration. ■filecite■turn1file0■L224-L243■

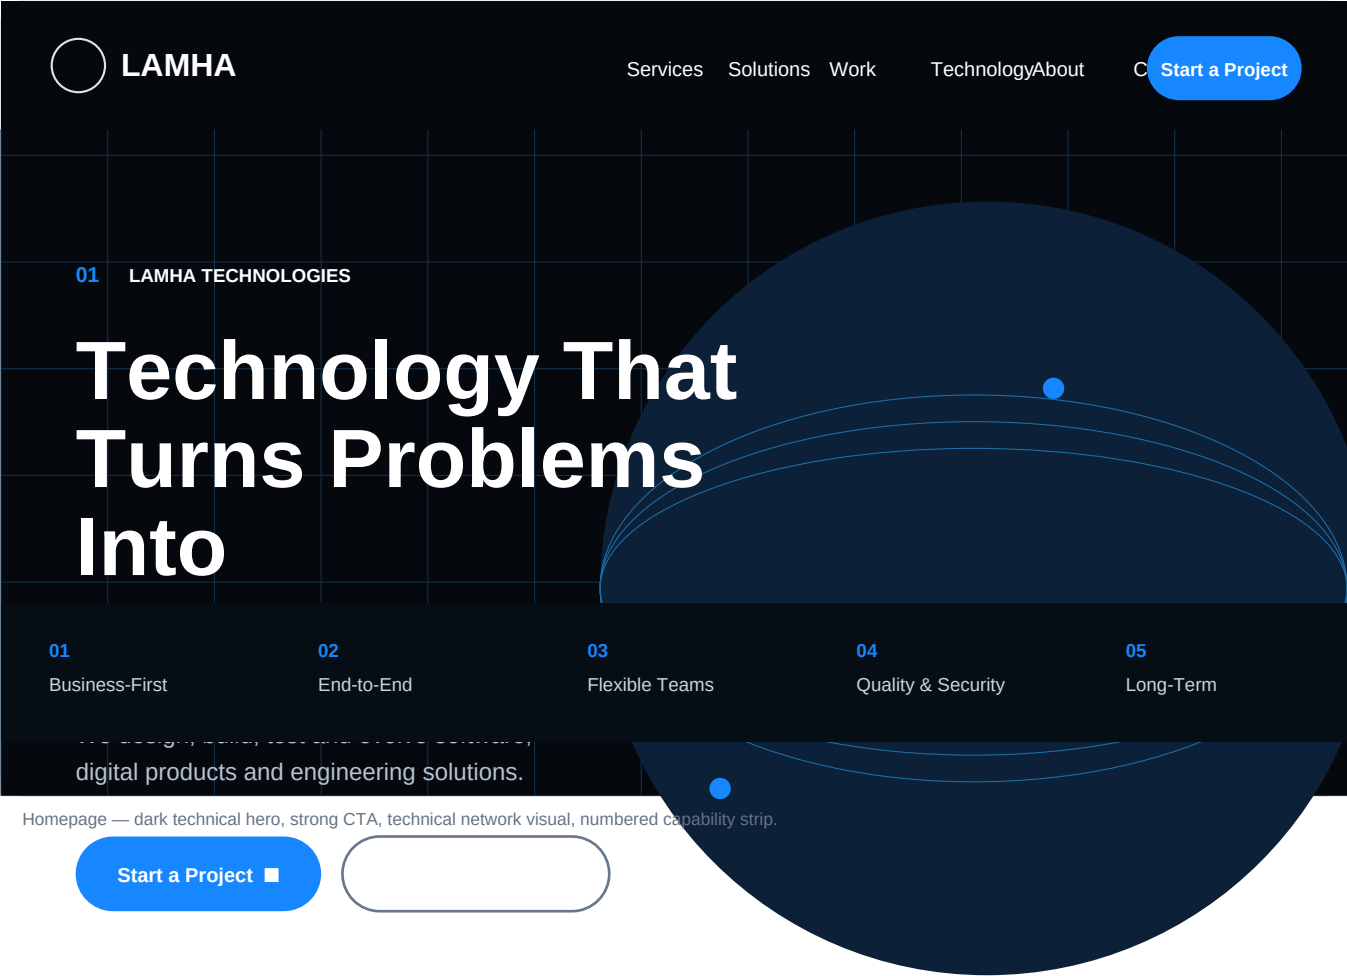

The visual system follows the PRD's finalized direction: premium digital studio + technical engineering company, near-black/navy hero and CTA areas, white editorial content, electric-blue accents, large typography, numbered sections, modular cards, technical imagery and restrained motion. ■filecite■turn1file0■L149-L169■

MVP SCREEN SET

Screen	Purpose	Primary CTA
Home	Positioning, services overview, process, technology, work teaser, founder, careers	Start a Project
Services	Organize all active services across three families	Explore Service
Service Detail	Explain one service, capabilities, process, technology and FAQs	Start a Project
Work	Present approved work / CMS-ready portfolio	View Case Study
About / Leadership	Explain LAMHA, mission, vision and leadership	Start a Project
Careers	Employer brand + open positions	Apply / View Positions
Start a Project	Capture qualified project requirements	Submit Project Inquiry

02 HOMEPAGE MVP

Visual mockup — representative layout, not a pixel-perfect production screenshot.

Homepage — dark technical hero, strong CTA, technical network visual, numbered capability strip.

03 SERVICES MVP

Visual mockup — representative layout, not a pixel-perfect production screenshot.

09 MVP IMPLEMENTATION NOTES

The mockups are intentionally faithful to the PRD's information architecture rather than being final visual assets. The PRD explicitly instructs the implementation team to treat the supplied reference image as visual direction rather than a pixel-copy target and to use original LAMHA components, imagery and brand treatment. ■filecite■turn1file0■L244-L252■

FUNCTIONAL MVP REQUIREMENTS

- Responsive desktop / tablet / mobile layouts.
- Service content structured so it can later move into a CMS.
- Start a Project form captures contact, project, service, budget, timeline, attachment and consent information.
- Form submission is prepared for a CRM-ready payload.
- Accessible keyboard navigation, visible focus, semantic headings, form labels, contrast and reduced-motion support.
- SEO foundations: titles, descriptions, canonical URLs, sitemap, robots and Open Graph.
- Analytics events for service views, CTA clicks, form starts and submissions.
- No fabricated client logos, testimonials, awards, metrics or case-study outcomes.

FUTURE CONNECTION

The target ecosystem in the PRD is: Website → API Layer → CMS / Lead API / Analytics → CRM, with a future path to qualification, LinkedOut/prospecting, Dialer/communication, proposal, contract, project delivery, invoice and customer management. ■filecite■turn1file0■L177-L185■

This PDF is therefore the **visual MVP handoff document**. It should be used alongside the full Final Website PRD v2.0 for implementation.
